

## Madrid in detail

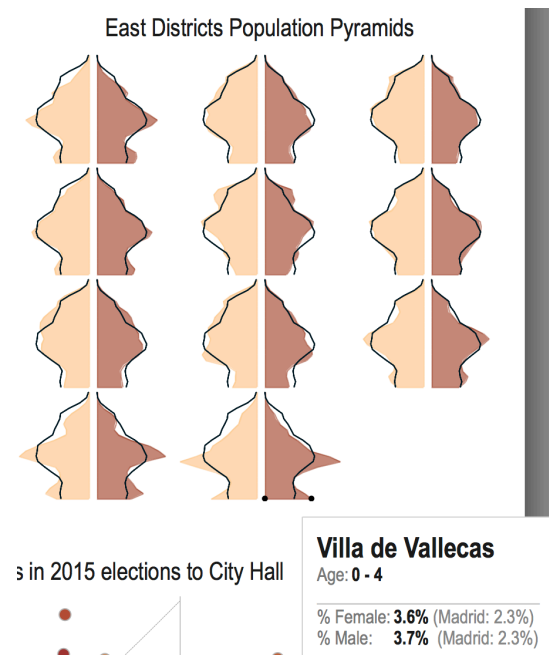

Madrid is the capital of Spain and its largest city, with a population of 3.18 million. It consists of 12 districts in this report, I will analyze the data as an business owner:

When we looking on dashboard we found the foreign percentage that upward ranking from 0 to 21 then when we click the last line which has the highest percentage shows us the name of the district and percentage, considering these data, we note that Centro is the most district in Madrid with 21% of foreign population, and we therefore conclude that it is one of the best places to establish Spanish-language institutes.

When we looking on east districts population we click on all of the districts and comparison the ages, we note that the number of older persons in Moratalaz is above the average, and we therefore conclude that it is one of the best states in Western Madrid for activities suitable for older persons such as centres for the rehabilitation of older persons.

When we looking on east districts population we click on all of the districts and comparison the ages, we note that the number of children aged 0 to 4 years in villa de vallecas is higher than the average, which is the highest in the states of Western Madrid. We therefore conclude that this state is the best for the work that targets this category, such as nurseries and centres for sale of children's clothes and accessories.

Thank you for reading and best of regards
